Project Objectives

01

Peak Hours & Days

Identify demand patterns

02

Car Type Popularity

Most & least used tiers

03

Fare Analysis

Distance, duration & price

04

Geographic Distribution

Pickup location mapping

Made with GAMMA

Data & Methodology

Dataset

20 ride records — synthetic data stored in Excel

- Ride ID, Date & Time, Locations
- Distance, Duration, Fare, Payment
- Car Type, Rider Rating

Tools & Workflow

Excel

Data creation & storage

Python (Colab)

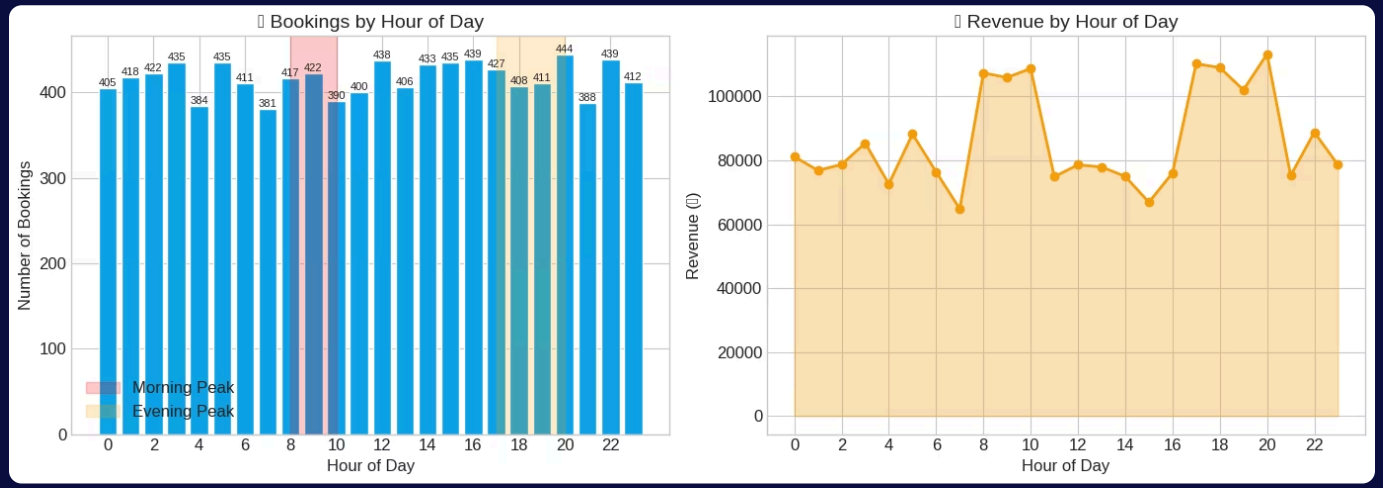
Cleaning, EDA, visualization

Power BI

Interactive dashboard

Made with GAMMA

Peak Hours: 8 AM & 7 PM



Commute-Driven Demand

Two clear surges align with **morning and evening commutes** — critical for driver allocation.

Ensure sufficient vehicles online during **7–9 AM** and **6–8 PM** to reduce wait times.

Made with GAMMA

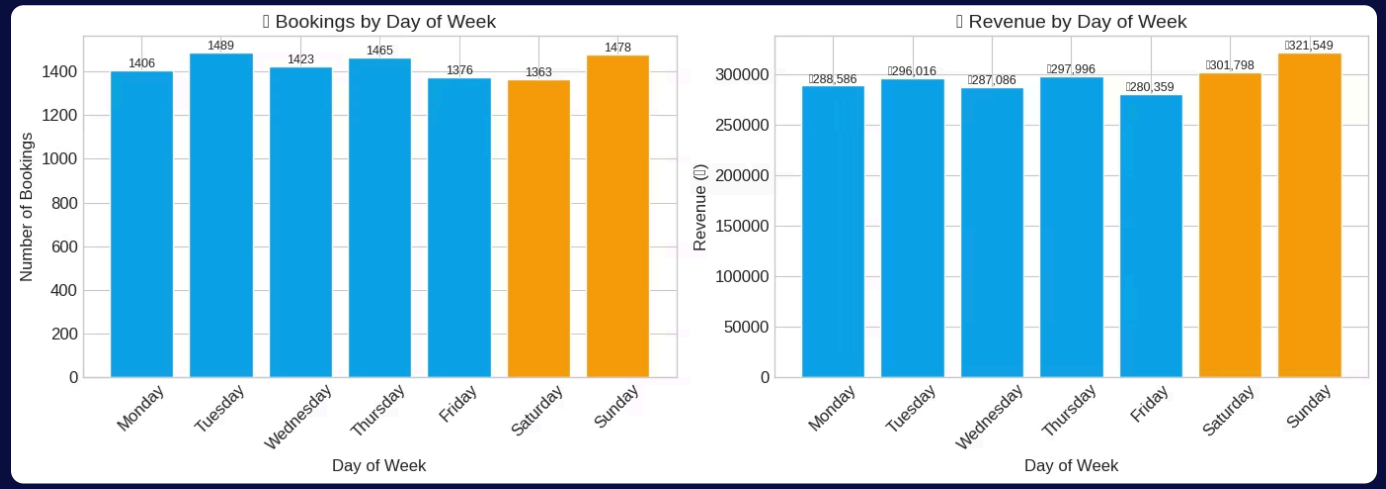
Busiest Days: Friday & Saturday

Leisure Travel Dominates

Weekend social activity drives peak ride volume — not just work commutes.

🎯 Opportunity

Time promotions for Fri/Sat to maximize engagement



Made with GAMMA

Car Type: 'Go' Dominates at 60%

Premium— 60%

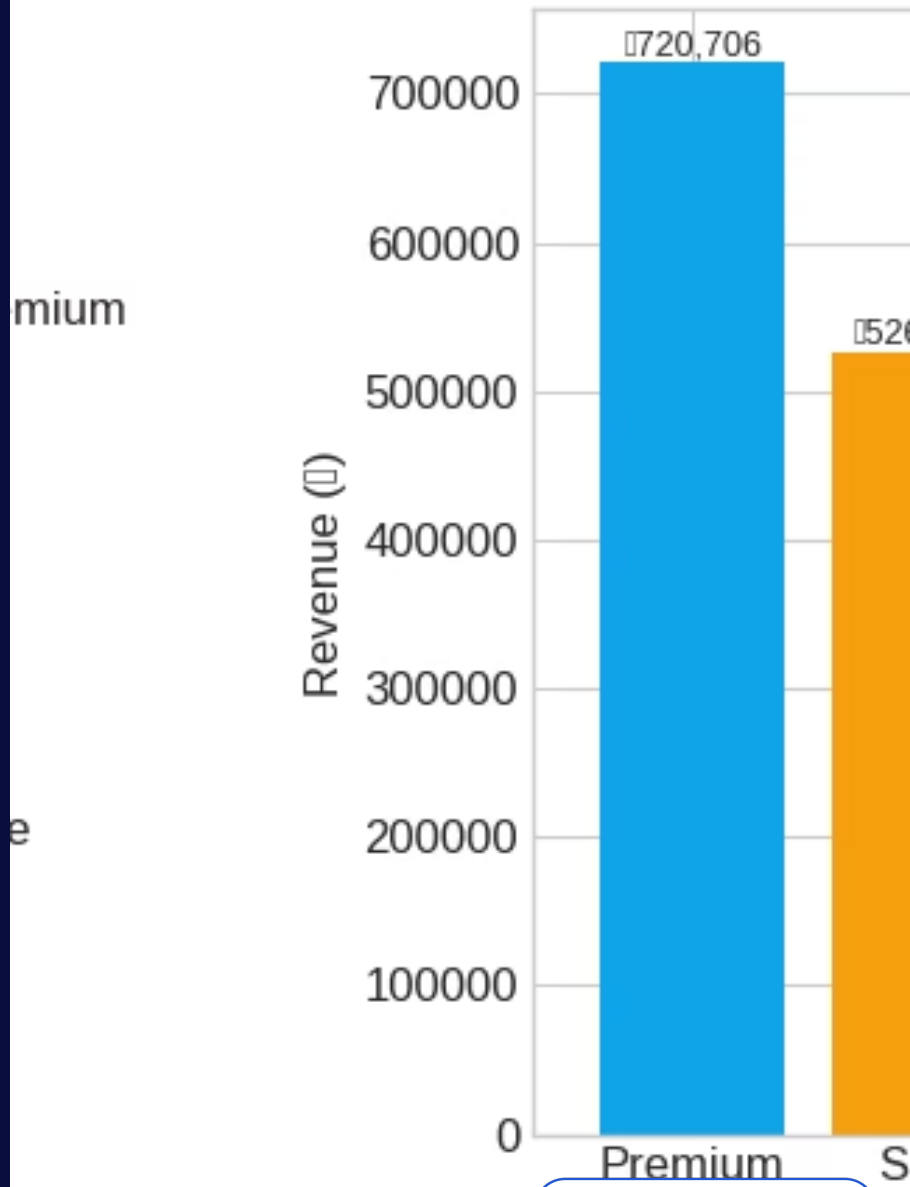
Economy, price-sensitive majority

SUV

Higher margin, upsell potential

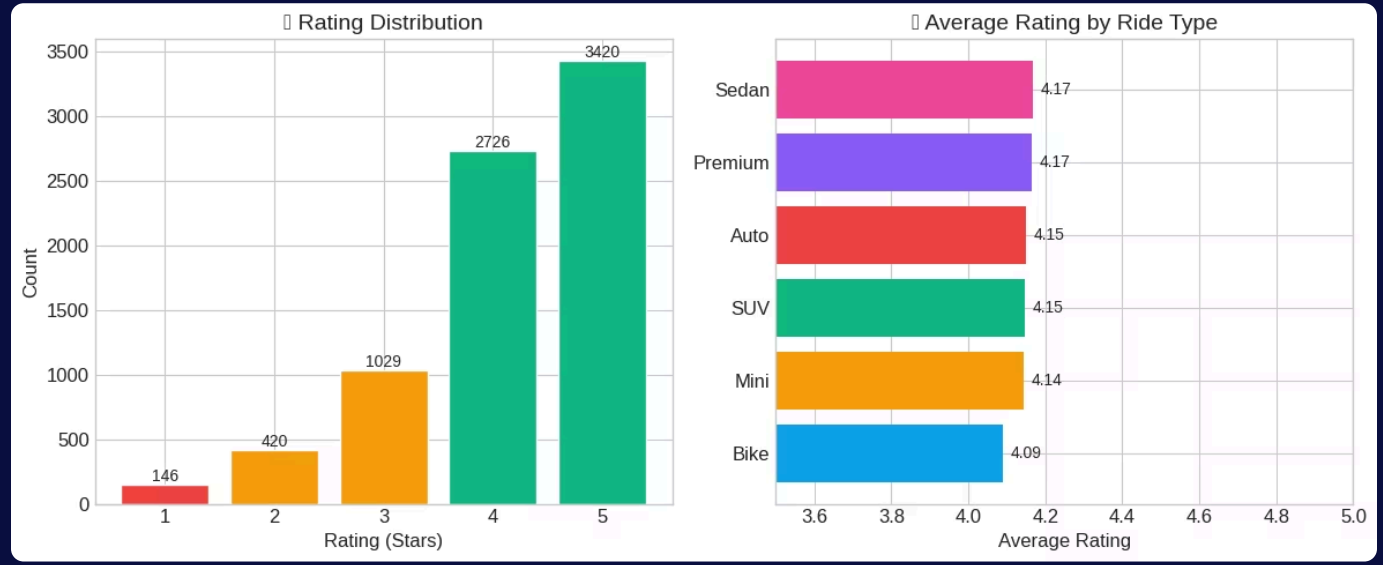
Premium

Niche, group travel segment



Made with GAMMA

Rider Ratings: High Satisfaction



Mostly 4–5 Stars

Strong overall user experience. Low ratings reveal improvement opportunities.

- Deep-dive into low-rated rides by car type, time, or driver for actionable insights.

Recommendations

1	**Dynamic Driver Allocation** Incentivize drivers during peak windows
2	**Targeted Promotions** "Weekend Specials" for Fri/Sat demand
3	**Upselling Strategy** Prompt Premier/XL upgrades for 'Go' users
4	**Pricing Model Review** Quantify car type & hour impact on fare
